DATA SHEET

Addressable Voice Call Point

Model - AA105VCP

Addressable Voice Call Point:

The main objective of the fire warning system is to alert the ground floor security staff about fire emergency situations and prompt them to take appropriate action. Conventional call points only trigger a signal, leaving the security staff to guess the location and nature of the fire emergency from remotely located occupants.

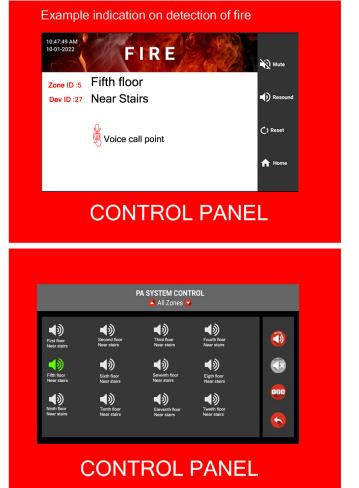

To enhance response efficiency, the Addressable Voice Call Point enables direct communication between occupants and security staff. Equipped with a microphone, occupants can provide detailed information about the problem, empowering the security staff to respond more effectively. This results in a quicker and more informed reaction to fire emergencies.

By utilizing this unit, occupants can speak directly to the security staff, who can, in turn, respond through the addressable PA speaker typically installed above this unit. Implementing the Addressable Voice Call Point eliminates the need for a separate talkback unit/system, as the addressable speaker above this unit serves as a two-way communication solution.

Complied with: UL 38

EN 54-Part 11

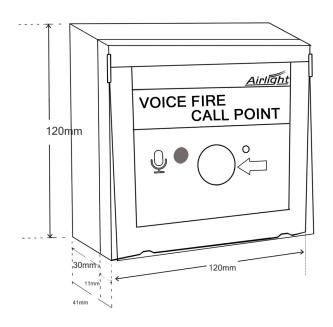

DATA SHEET

Addressable Voice Call Point Model - AA105VCP

The Manual Call Point features a protective flip cover made of strong and transparent polycarbonate material, ensuring durability and easy access.

It incorporates a large and prominent push button with an electronic latch circuit. There is no need for an extra key for resetting, as it can be done remotely from the control panel.

Indications

Normal indicator	Green LED (Blinks during
	scan)
ON Activation	Green LED (Glow steady)

Electrical specifications

Operating voltage	18-24V DC
Quiescent current	200μΑ
Alarm current	1mA(max)
mic current	50mA(max)

General specifications

Operating temperature	-10ºC to 55ºC
Storage temperature	-10ºC to 60ºC
Humidity	0-95% RH (Non- condensing)
Colour	Red
Housing	ABS
